Projects

Board Game Tracking   January 2015 - Present
                                       www.boardgametracking.com
Technologies: Bootstrap, Angular, MongoDB, NodeJs, Express
- A Web application that allows real time tracking of money in board games like Monopoly or Powergrid.
- I am the owner and maintainer of the application.
- The server is Nodejs with Express Middleware, the frontend logic is controlled with Angular JS

TimeTracker   February 2015 - Present
                                      www.github.com/siefkenj/timeTracker
Technologies: ForerunnerDB, Angular, Bootstrap, Coffeescript
- A webpage that is used to track time with other people.
- I wrote the calendar page and helped integrate forerunnerdb into the page.
- The project is written in Coffeescript with angular controlling all functions
